

“The intruder security systems use Honeywell Galaxy panels which are fully integrated with 'Control Center' over the IP network. This tight integration allows improved operator efficiency and incident response. Control room personnel at Cathcart House and locally at each site can talk to site personnel using IP intercoms, which are again fully integrated into 'Control Center'.”

SCOTTISHPOWER

ScottishPower, Utility Company, UK

IndigoVision's complete IP Video system is at the heart of an innovative multi-site integrated security solution for ScottishPower, one of the UK's largest utility companies. The system integrates CCTV, intruder alarms, intercoms and control of gates, barriers and doors through IndigoVision's 'Control Center' IP Video and alarm management software. The system was installed by IndigoVision's approved partner Pointer Limited across four existing sites and in a new central control room at Cathcart House, the company's HQ. All this is achieved across an IP network.

'Control Center' workstations can be located at any point on the IP network and can view live and recorded video from any camera, from any site. In addition 'Control Center' software is licensed on a per seat basis free of charge, which allows workstations to be installed for no more than the cost of an entry-level PC. ScottishPower have benefited from this by installing several workstations in the central control room as well as one at each remote site.

ScottishPower now has a truly flexible and scalable solution that can be easily expanded in the future. The existing cameras have been re-used by connecting them to IndigoVision's latest H.264 9000 transmitter/receiver modules.
